Gemini

New York, New York

June 22, 2026

Dear Gemini Hiring Team,

I am excited to apply for the Software Engineering Intern position at Gemini for Fall 2026. I am a Computer Engineering student at Boston University with a 3.97 GPA, a Division I rower, and experience building production software across financial data systems, full-stack products, and performance-oriented applications. My interest in blockchain began in 2017 through my cousin, who was working at a blockchain startup in London, and has grown into a broader belief that Web3 can become core infrastructure for trust, ownership, and financial access online.

Gemini stands out to me because it combines crypto-native ambition with the discipline required to build regulated financial products. I am drawn to engineering problems where security, correctness, reliability, and customer trust are central to the product. This summer, as a Software and AI Engineering Intern at Banca Mediolanum, I have been building internal infrastructure for LLM-agent governance, semantic search, benchmarking, and retrieval-augmented workflows in an environment where access control, auditability, and data quality matter.

I have also owned production systems outside the classroom. I rebuilt an inventory platform into a faster and more maintainable application supporting real business workflows, and at TickIT I contributed to ticket authentication and QR-code validation systems. That work introduced me to problems closely related to cryptographic thinking: proving authenticity, preventing tampering, and designing software that users and operators can trust.

Competing as a Division I rower while maintaining a demanding Computer Engineering course load has built the discipline, accountability, and feedback-driven mindset I bring to technical teams. I would be excited to contribute to Gemini by building reliable frontend or backend systems and helping ship products that make digital assets safer, more useful, and more accessible.

Thank you for your time and consideration. I would be grateful for the opportunity to contribute to Gemini as a Software Engineering Intern.

Sincerely,

Giacomo Cappelletto
