Research opportunity conversation with Prof. Wei-Lun (Harry) Chao

July 7, 2026

How I got into AI/ML

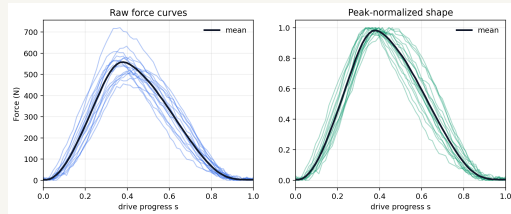

Now: computer vision, deep learning, and real-world signals

Current research: video-to-force inference

Video -> pose / kinematics

RP3 force curves -> sequence targets

Sports2D / MotionBERT

drive-progress alignment

TCN / Transformer

The hard part was not the model.

alignment

quality control

generalization

limited paired data + occlusion + drift

Why this opportunity fits

Chao group themes

imperfect data

robust perception

multi-source data

transfer

domain adaptation

vision-language

What I want to grow into

computer vision

deep learning

sequence models

evaluation

real-world noisy data

research rigor

A small real-world CV system with limited supervision is the bridge.

What I hope to do

Contribute

Python ML pipelines

data cleaning / QC

reproducible experiments

Learn

research design

CV / deep learning depth

evaluation discipline

Availability

AU26: 10-15 h/wk

SP27: 10 h/wk

Aug: light remote prep

Relevant courses: Probability / Statistics / Data; Computational Linear Algebra; Applied Algorithms; Logic Design; Software Engineering; Multivariable Calculus; Differential Equations; Physics; CS I/II credit.
