Anduril Industries  
Boston, Massachusetts  
June 22, 2026

Dear Anduril Hiring Team,

I am excited to apply for the 2027 Software Engineer Intern position at Anduril. I am a Computer Engineering student at Boston University with a 3.97 GPA, a Division I rower, and experience building software across AI systems, computer vision, data infrastructure, and production applications. Anduril stands out to me because its software is not abstract: it turns autonomy, sensing, networking, and real-time decision systems into products with direct operational impact.

My strongest fit for Anduril is the way I approach problems: if something is broken, unclear, or inefficient, I want to understand it and fix it. This summer, as a Software and AI Engineering Intern at Banca Mediolanum, I have been building internal infrastructure for LLM-agent governance, semantic search, benchmarking, and retrieval-augmented workflows in an environment where reliability, access control, and clear debugging matter. That work has pushed me to take ownership beyond isolated features: understanding the system, identifying failure points, and making the tool usable for both technical and non-technical stakeholders.

I am also naturally curious about the technologies I use, especially when software connects to the physical world. In my rowing biomechanics research, I built computer-vision pipelines that stabilize video, extract 2D pose, lift motion into 3D skeletons, and align motion data with rowing force telemetry. That work made me interested in the same technical areas Anduril works on at scale: perception, sensor-derived data, real-time analysis, and building systems that remain useful under noisy real-world conditions.

Outside research, I have owned production software end to end, including rebuilding an inventory platform into a faster and more maintainable application and contributing to authentication and backend workflows at TickIT. I try to bring high ownership and modesty to teams: ask direct questions, accept feedback quickly, and push work forward without waiting for perfect instructions. Competing as a Division I rower has reinforced that mindset through daily accountability, high standards, and commitment to a team mission.

Thank you for your time and consideration. I would be grateful for the opportunity to contribute to Anduril as a 2027 Software Engineer Intern.

Sincerely,

Giacomo Cappelletto
