PROFESSIONAL SUMMARY

Computer Engineering student at Boston University, competing in Division I Varsity Crew. I build full-stack applications, native desktop apps, and computer vision/biomechanics pipelines. Open to software engineering, full-stack, applied ML, and related internship opportunities.

EDUCATION

- **Boston University, Boston, MA** 2024 – 2028
B.Sc. in Computer Engineering; GPA: 3.97
- **H-Farm International School, Venice, Italy** 2022 – 2024
International Baccalaureate (IB) Diploma *HL: Mathematics, Physics, Computer Science*

EXPERIENCE

- **Boston University Men's Rowing, Boston, MA** Sep 2024 – Present
NCAA Division I Student-Athlete
 - **Competition:** Compete on Boston University's men's rowing team at the Division I and national level.
 - **Commitment:** Balance 20+ hours per week of training, competition, travel, and team commitments alongside a full Computer Engineering course load.
 - **Leadership:** Build discipline, leadership, teamwork, and performance consistency under pressure.
 - **Awards:** Freshman Student-Athlete of the Year (2025); Most Improved Oarsman (2026).
- **Boston University Men's Rowing, Boston, MA** Jan 2026 – May 2026
Software Engineer
 - **Mobile-first training tracker:** Built a rowing team training tracker unifying athlete logging and coach oversight with proof-validated entries, leaderboards, and weekly summaries; team-specific requirements/exemptions and configurable weekly cutoffs.
 - **Data + Automation platform:** Implemented on Supabase with Prisma-backed data models for secure role-based access, scalable reporting, weekly recap emails, and proof retention.
- **Boston University College of Engineering, Boston, MA** Jan 2026 – May 2026
Undergraduate Researcher
 - **Biomechanics Pipeline:** Building a Python pipeline to stabilize rowing video, run single-athlete 2D keypoint inference (MMPose), lift to 3D skeletons (MotionBERT), and output per-frame joint angles/positions.
 - **Kinematic Analysis:** Computing stroke-averaged kinematics from 3D skeleton sequences to quantify coordination, range of motion, and technical consistency across strokes.
 - **Modeling:** Training a sequence-to-sequence regression model mapping time-aligned kinematics to rowing force curves, validated against instrumented on-water/erg telemetry.
- **SOCIETA CAPPELLETTO S.R.L., Treviso, Italy** May 2025 – Oct 2025
Tauri Inventory Management System Rebuild
 - **Migration & Performance:** Rebuilt an Electron inventory app using Tauri, React, and Rust, reducing app size by 70%, memory usage by 80%, and startup time by 60%; improved Shopify inventory search by 43% via parallel API processing and GraphQL-optimized queries.
 - **Advanced Features:** Built SKU-based instant search, Firebase-backed modification history, real-time inventory reconciliation, and multi-location inventory update workflows.
- **TickIT GmbH, Remote** Nov 2024 – Feb 2025
Frontend & Backend Engineer
 - **Overview:** Built responsive UIs (Next.js, shadcn/ui, Tailwind) and backend features (Rails, PostgreSQL); shipped scalable API integrations for a ticketing platform.
 - **Contribution:** Contributed architecture for ticket authentication and improved Agile workflows while ramping quickly on a new stack.

- **SOCIETA CAPPELLETTO S.R.L., Treviso, Italy** Jun 2024 – Present
Full-Stack Developer (Inventory Management System)
 - **Project:** Sole developer of an Electron + React + Node.js app using Shopify API and Firebase Firestore to update online shop inventory from in-store sales across two locations; ongoing feature development and maintenance.
 - **Distribution:** Shipped releases via GitHub Releases and Electron auto-updater for distributed deployment.
- **H-Farm International School, Roncade, Italy** Apr 2024 – Present
Python Developer (Meeting Scheduling App)
 - **Application:** Built a Python/Streamlit app using ManageBac timetables to locate students' schedules and free periods, generating professor-ready meeting-request emails via local LLMs (Ollama).
 - **Collaboration:** Partnered with faculty to tailor workflows and integrate with existing processes, improving scheduling efficiency.
- **ASD DLF Treviso, Treviso, Italy** Oct 2023 – Present
iOS Developer (Rowing Logbook App)
 - **Development:** Built a Swift/SwiftUI iOS app for athletes to log training sessions and analyze progression over time using Swift Charts.
 - **Process:** Led planning and evaluation through athlete interviews; owned end-to-end development.
- **E-TRASH, Roncade, Italy** Mar 2023 – Jul 2023
CAD Engineer Intern
 - **CAD Modeling:** Designed the first prototype of an intelligent trash bin in Autodesk Fusion 360, focusing on structural integrity.
 - **Optimization:** Applied topology optimization and load testing; produced Blender renders for presentations and iteration.

PROJECTS

- **NoteWorthy – Automated Note Conversion Platform:** Built noteworthyy.xyz, a Next.js/TypeScript app that converts handwritten notes into styled PDFs and LaTeX. Integrated Google AI Studio, GitHub/Google OAuth, and a Dockerized LaTeX compiler; deployed via Cloud Run and Vercel.
- **CIFAR-10 Image Recognition with Neural Architecture Search:** Built a TensorFlow/Keras CIFAR-10 classifier and neural architecture search pipeline to generate and evaluate CNN candidates. Automated training, metric logging, and best-model selection for extended training.

SKILLS

- **Languages:** TypeScript/JavaScript, Python, Rust, Ruby, C/C++, Swift, Java
- **Frameworks & Libraries:** Next.js, React, Ruby on Rails, Node.js, Tauri, SwiftUI, TensorFlow/Keras
- **Tools & Platforms:** Git/GitHub, Supabase, Prisma, Tailwind CSS, PostgreSQL, Docker, Firebase, Shopify API (GraphQL), Streamlit, Ollama, Google Cloud Run, Vercel
