Quantic — Walleye Capital

Boston, MA

11/06/26

Dear Quantic Hiring Team,

I am excited to apply for the Quantic Quantitative Researcher Intern position for Summer 2027. I am a Computer Engineering student at Boston University with a 3.97 GPA, and I am drawn to Quantic because the role sits exactly at the intersection I want to work in: statistical modeling, machine learning, large-scale data analysis, research infrastructure, and systematic decision-making in markets.

My background combines applied ML research, production software engineering, and quantitative data work. At Banca Mediolanum, I have been analyzing large customer datasets with SQL, building Python models for churn and customer behavior, and developing LLM-agent tools for marketing analytics. At Boston University, I built a biomechanics ML pipeline that stabilizes rowing video, extracts 2D/3D pose sequences, computes stroke-level kinematics, and trains sequence models to predict force-curve dynamics from motion data. I have also built and shipped full-stack systems in TypeScript, Python, Rust, PostgreSQL, Supabase, and Firebase, often as the sole developer responsible for the full product lifecycle.

What makes Quantic especially compelling to me is the combination of intellectual rigor and practical engineering impact. I enjoy open-ended problems where the answer is not obvious, the data is messy, and the solution has to be both statistically sound and implemented cleanly. I would be eager to learn from experienced researchers, contribute to research tools and models, and collaborate with engineers and traders on work that directly affects real investment decisions.

Thank you for your time and consideration. I would be grateful for the opportunity to contribute to Quantic and grow in a team that values analytical depth, initiative, collaboration, and continuous learning.

Sincerely,

Giacomo Cappelletto
