The D. E. Shaw Group
Two Manhattan West
375 Ninth Avenue
New York, NY 10001
June 16, 2026

Dear D. E. Shaw Hiring Team,

I am a Computer Engineering student at Boston University (GPA: 3.97) and a Division I rower, currently interning at Banca Mediolanum building enterprise LLM-agent infrastructure on Databricks, including versioned prompt storage, retrieval-augmented search, and semantic benchmarking via MLflow. I am applying primarily for the Systems Engineering Intern role, with interest in the Software Developer position as well.

My experience maps directly to what your Systems team works on. At Banca Mediolanum I have owned the full cycle from design through delivery for tools used by both technical and non-technical staff. Before that, I rebuilt a production inventory platform in Tauri and Rust, cutting app size by 70% and memory usage by 80% through parallel API processing and GraphQL optimization. I have also shipped full-stack applications in production and built a role-based training platform on Supabase used live by Boston University's rowing program.

On the Software Developer side, I am drawn to the intersection of high-performance systems and quantitative decision-making. My work building scalable data pipelines, evaluation frameworks, and real-time applications gives me a foundation I would be eager to apply to trading infrastructure.

Thank you for your time and consideration. I would be grateful for the opportunity to contribute to the D. E. Shaw group as a Systems Engineering Intern and would also welcome consideration for the Software Developer Intern role.

Sincerely,

Giacomo Cappelletto
