Walleye Capital / Quantic Boston, MA June 18, 2026

Dear Quantic Hiring Team,

I am excited to apply for the Quantic Quantitative Developer Intern position for Summer 2027. I am a Computer Engineering student at Boston University with a 3.97 GPA, and my work sits at the intersection of software engineering, data infrastructure, applied machine learning, and quantitative modeling. Quantic stands out to me because the role connects rigorous analysis with production systems that directly affect trading decisions.

At Banca Mediolanum, I have been building infrastructure for enterprise LLM-agent prompt governance, including versioned storage, retrieval-augmented search, semantic benchmarking, and evaluation workflows. This work uses Python, SQL, Databricks, Unity Catalog, Delta tables, Vector Search, and MLflow GenAI Evaluation, and it requires careful attention to reliability, traceability, and data quality. I have also worked with large customer datasets through SQL and Python, which aligns closely with Quantic's need for robust data pipelines, analysis tooling, and systems that support research iteration.

My academic research further matches the quantitative and engineering nature of the role. I built a rowing biomechanics ML pipeline that processes video, extracts 2D pose, lifts motion to 3D skeletons, computes stroke-level kinematics, and aligns those signals with rowing force telemetry. The project involves noisy real-world data, time-series modeling, sequence-to-sequence prediction, and reproducible pipeline design. Separately, I rebuilt an inventory platform using Tauri, React, Rust, Firebase, and Shopify GraphQL, giving me experience owning production software where performance, correctness, and maintainability matter.

I would bring Quantic a practical engineering style: I like building systems that make data easier to trust, analyze, and use. Competing as a Division I rower while maintaining a demanding Computer Engineering course load has also shaped the discipline, collaboration, and execution under pressure that I bring to technical teams.

Thank you for your time and consideration. I would be grateful for the opportunity to contribute to Quantic as a Quantitative Developer Intern.

Sincerely,

Giacomo Cappelletto
