Walleye Capital

New York, NY

June 18, 2026

Dear Walleye Capital Hiring Team,

I am excited to apply for the Risk Technology Analyst Intern position at Walleye Capital. I am a Computer Engineering student at Boston University with a 3.97 GPA, and my work combines software engineering, data infrastructure, applied machine learning, and quantitative analysis. This role interests me because it connects scalable technical systems with portfolio risk, real-time analytics, and market-facing decision support.

At Banca Mediolanum, I have built enterprise infrastructure for LLM-agent prompt governance and evaluation using Python, SQL, Databricks, Unity Catalog, Delta tables, Databricks AI Search, SQL Warehouses, Dash, and MLflow GenAI Evaluation. My work has included versioned data models, retrieval-augmented search, benchmarking workflows, and internal tools for technical and non-technical stakeholders. I have also worked with large customer datasets in SQL and Python, contributing to predictive modeling and customer behavior analysis. This background aligns closely with Walleye's need for reliable data pipelines, analytics tooling, reporting workflows, and internal systems for risk and investment teams.

My academic research has strengthened the quantitative and time-series side of my engineering background. In my rowing biomechanics ML pipeline, I built Python workflows for video stabilization, 2D pose extraction, 3D motion lifting, stroke segmentation, telemetry alignment, and sequence-to-sequence modeling from kinematics to force curves. The project required extracting signals from noisy real-world data, aligning multiple sources, validating outputs, and building reproducible analysis pipelines. I am interested in applying that same disciplined approach to exposures, attribution, P&L explain, scenario analysis, and portfolio sensitivity.

I also bring production software ownership from rebuilding an inventory platform with Tauri, React, Rust, Firebase, and Shopify GraphQL, where performance, maintainability, API reliability, and operational workflows mattered directly to users. Competing as a Division I rower while managing a demanding Computer Engineering course load has also built the discipline, communication, and accountability I bring to collaborative technical teams.

Thank you for your time and consideration. I would be grateful for the opportunity to contribute to Walleye Capital as a Risk Technology Analyst Intern.

Sincerely,

Giacomo Cappelletto
