EDUCATION

Boston University

B.S. in Computer Engineering; GPA: 3.97/4.00

Expected May 2028

Boston, MA

EXPERIENCE

Boston University - Prof. Brian Kulis

Undergraduate Machine Learning Researcher

Aug 2026 – Present

Boston, MA

- Researching robust human-motion retrieval by learning fixed-length embeddings from temporal 2D/3D pose sequences for nearest-neighbor search across labeled movement classes.
- Comparing contextual, contrastive, triplet, supervised-contrastive, and classification objectives with Recall@K and mAP under pose noise, missing joints, jitter, occlusion, and viewpoint shift.

Banca Mediolanum

Software & AI Engineering Intern, Customer Knowledge

Jun 2026 – Aug 2026

Milan, Italy

- Owned an internal AI-agent platform across architecture, full-stack implementation, evaluation, Databricks deployment, and stakeholder iteration.
- Built a LangGraph/MLflow agent with governed SQL tools, citation-backed retrieval, request-scoped context, typed Pydantic contracts, evidence review, tracing, and versioned evaluation workflows.
- Delivered substantially lower end-to-end latency than Databricks Genie across multi-step, multi-domain benchmarks while maintaining identical accuracy.
- Participated in executive meetings across IT, finance, marketing, and advisory functions, recommending architectures based on performance, feasibility, system design, operations, and cross-department data/resource requirements.

Boston University College of Engineering

Undergraduate Machine Learning Researcher

Jan 2026 – May 2026

Boston, MA

- Built a Python vision pipeline to stabilize rowing video, estimate 2D keypoints with MMPose, lift poses to 3D with MotionBERT, and derive stroke-level kinematics.
- Matched 20 controlled-run strokes into 1,203 aligned rows with 11.43 ms drive-duration MAE, then trained sequence models over a shared 64-by-14 kinematic tensor for force-curve inference.

Societa Cappelletto S.r.l.

Software Engineer

May 2025 – Oct 2025

Treviso, Italy

- Rebuilt a production inventory application in Tauri, React, and Rust, reducing size by 70%, memory use by 80%, startup time by 60%, and search latency by 43%.

SELECTED PROJECTS

Rowing Biomechanics Pipeline | GitHub

PyTorch, MMPose, MotionBERT

- Built an inspectable video-to-force research system with dynamic-programming stroke alignment, quality-gated datasets, model bundles, video-only inference, reports, and 50 tests across eight modules.

NoteWorthy | GitHub

Next.js, Gemini, Docker, Cloud Run

- Built a multimodal application that streams handwritten-note conversion into styled LaTeX and PDFs through guarded generation and configurable compilation services.

LEADERSHIP & ATHLETICS

Boston University Men's Rowing | NCAA Division I Student-Athlete | Sep 2024 – Present

- Freshman Student-Athlete of the Year (2025); Most Improved Oarsman (2026).

SKILLS

Languages: Python, SQL, TypeScript/JavaScript, Rust, C/C++

ML: PyTorch, TensorFlow/Keras, metric learning, contrastive learning, sequence modeling, computer vision, embeddings, RAG, LLM agents

Platforms: MLflow, LangGraph, Databricks, MMPose, MotionBERT, PostgreSQL, Docker, Google Cloud Run
