EDUCATION

Boston University

B.S. in Computer Engineering; GPA: 3.97/4.00

Expected May 2028

Boston, MA

EXPERIENCE

Boston University - Prof. Brian Kulis

Undergraduate Machine Learning Researcher

Aug 2026 – Present

Boston, MA

- Researching metric-learning algorithms for temporal retrieval and comparing contextual, contrastive, triplet, and classification objectives with Recall@K and mAP under controlled perturbations.

Banca Mediolanum

Software & AI Engineering Intern, Customer Knowledge

Jun 2026 – Aug 2026

Milan, Italy

- Owned architecture and implementation of an internal AI-agent and data-access platform, translating business requirements into deployed, traceable Databricks workflows.
- Built governed SQL tools over Unity Catalog and Delta data with typed contracts, permission-aware retrieval, citation-backed evidence, request-scoped context, and MLflow tracing.
- Delivered substantially lower end-to-end latency than Databricks Genie across multi-step, multi-domain benchmarks while maintaining identical accuracy.
- Participated in executive meetings across IT, finance, marketing, and advisory functions, recommending architectures based on performance, feasibility, system design, operations, and cross-department data/resource requirements.

Boston University College of Engineering

Undergraduate Machine Learning Researcher

Jan 2026 – May 2026

Boston, MA

- Built a 2D-to-3D biomechanics pipeline and matched 20 controlled-run strokes into 1,203 aligned rows with 11.43 ms drive-duration MAE for sequence-to-sequence force modeling.

Societa Cappelletto S.r.l.

Software Engineer

May 2025 – Oct 2025

Treviso, Italy

- Rebuilt an Electron inventory application in Tauri, React, and Rust, reducing size by 70%, memory use by 80%, startup time by 60%, and Shopify search latency by 43%.

TickIT GmbH

Frontend & Backend Engineer

Nov 2024 – Feb 2025

Remote

- Built Ruby and Next.js systems for spending tracking, forecasting, event-cost planning, operational metrics, payments, and QR ticketing across a 150,000-line platform in a four-engineer team.

SELECTED PROJECTS

Alpha Bot - Residual Alpha and Statistical Arbitrage

Python, Parquet, PostgreSQL

- Built a research and paper-trading platform with point-in-time data, cost-adjusted labels, walk-forward and purged validation, neutral portfolio constraints, promotion gates, reconciliation, and structured audit logs.

MOVE Enterprise AI Platform

Databricks, SQL, MLflow

- Built governed analytical tools and evaluation infrastructure for scoped enterprise data and documents, prioritizing execution correctness, evidence, and business-semantic invariants over raw latency.

LEADERSHIP & ATHLETICS

Boston University Men's Rowing | NCAA Division I Student-Athlete | Sep 2024 – Present

- Freshman Student-Athlete of the Year (2025); Most Improved Oarsman (2026).

SKILLS

Languages: Python, C/C++, Rust, SQL, TypeScript/JavaScript, Java, Ruby

Systems/Data: PostgreSQL, Databricks, Delta Lake, Unity Catalog, FastAPI, Tauri, GraphQL, Docker, Git

Modeling: PyTorch, TensorFlow/Keras, metric learning, sequence modeling, walk-forward validation, portfolio constraints, RANSAC
