Bending Spoons S.p.A.

Via Nino Bonnet 10

Milan, Italy, 20154

30/03/25

Dear Bending Spoons HR Team,

I am excited to be part of the Software Engineering Intern application process at Bending Spoons. As a passionate student and developer in the world of software engineering, I am honored to be considered as a candidate for this position. Furthermore, the opportunity to work for an Italian company excites me even more, as I have a deep connection with my country of origin and take great pride in my nationality.

What attracts me most about Bending Spoons is the attributes and values your company embodies. I strongly believe that being passionate about the projects and tasks I undertake is what makes me—as well as anyone else—successful at them. When I developed my first software product, an iOS app for logging rowing workouts, I was highly driven to succeed because I was passionate about this endeavor, both from a development and personal perspective. As an international-level athlete myself, I recognized the value in the product I was creating and was therefore motivated to build something special. I thoroughly enjoyed the process of learning iOS application development, a challenge that seemed insurmountable given my limited experience at the time.

At Bending Spoons, the technologies you are developing are fascinating to me, especially AI-focused platforms such as Remini and sport-based applications like Komoot, which I have been a longtime user of. Working and learning at your company would not only expand my knowledge of the industry but would also mean contributing to projects that I have a natural curiosity for and would be thrilled to work on.

Having accumulated extensive experience with both Swift and TypeScript-based development frameworks—Xcode, Next.js, and Electron to name a few—I believe I would be a great fit for your company as an intern. I would be able to integrate into existing projects with minimal training and could focus on absorbing information regarding the development best practices that are key to producing the sleek and functional applications Bending Spoons is known for. My deep interest in Machine Learning and Artificial Neural Networks, as well as the mathematical principles that underpin them, is particularly captivating to me and would further fuel my curiosity and drive for success at Bending Spoons, especially if working with your AI-driven products.

I would welcome the opportunity to discuss how my skills and enthusiasm align with your team's needs. Thank you for considering my application, and I look forward to the possibility of contributing to Bending Spoons' innovative work.

Sincerely,

Giacomo Cappelletto
