WHO AM I?

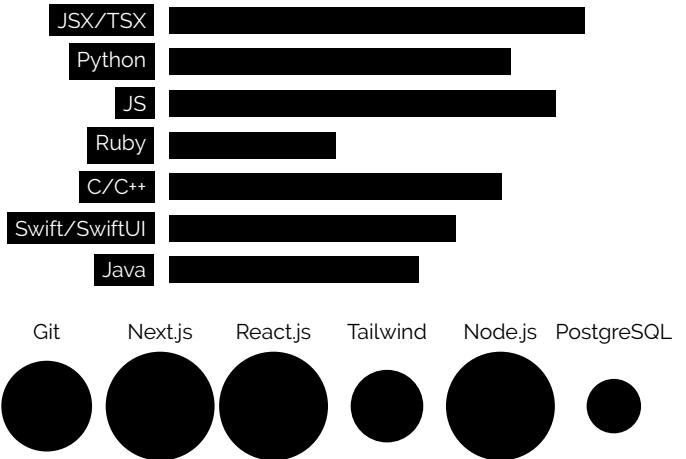

I'm a passionate Full-Stack Engineer and Computer Engineering student at Boston University, eager to learn and gain experience on the industry in fast-paced, dynamic environments. I've accumulated extensive development experience by building solutions which ranged from an inventory management system for family businesses to a ticketing platform using Next.js and Rails. Currently, I'm currently developing on NoteWorthy, a tool that transforms handwritten notes into styled PDFs and LaTeX. As a Division 1 rower and international student, I bring a team-driven mindset and a relentless drive to adapt, innovate, and grow.

LANGUAGES

English - Native

Italian - Native

Spanish - Rudimentary (B2)

RELEVANT EXPERIENCES

10/2024 – 1/2025

Frontend & Backend Engineer – Ticketing Platform Startup

TickIT GmbH, Boston, MA, United States (Remote)

- Served as a FullStack Development Apprentice at an early-stage ticketing startup.
- Contributed to both frontend and backend work by engineering responsive UIs with Next.js, Shadcn components, and Tailwind CSS, and by developing backend functionality with Ruby on Rails and PostgreSQL.
- Provided key architectural input on the ticket authentication flow while rapidly mastering new frameworks in a fast-paced, collaborative and remote environment.

5/2024 – 7/2024

Full Stack Native App Developer - Online Inventory Management SystemsOCIETA CAPPELLETTO S.R.L., Treviso, Veneto, Italy (On-site)

- Single-handedly developed an Electron-React-Node.js application integrating the Shopify API and Firebase Firestore to update online shop inventory across two locations through SKU codes at in store sales.
- Self-taught Electron and Node.js fundamentals to build a solution that is regularly updated and distributed via GitHub Releases and Electron Autoupdater.
- Solution completely eliminated online inventory discrepancies and reduced manual labor times at checkout by 80%.

3/2024 – 4/2024

Python Developer - Student Meeting Application Developer

H-FARM International School, Treviso, Veneto, Italy (On-site)

- Created a Python Streamlit application that used school timetables from Managebac to track student schedules and automatically generate meeting request emails via local LLMs in Ollama.
- Worked alongside the school faculty in order to develop a solution that was tailored to their needs and integrated seamlessly with existing systems.

9/2023 – 11/2023

iOS Developer - Rowing LogBook Application

DLF Treviso, Treviso, Veneto, Italy (On-site)

- Developed an iOS app in Swift/SwiftUI (with Swift Charts) for athletes to log training sessions and analyze progress.
- Involved complete planning, development, and evaluation through athlete interviews.

PROJECTS

2/2025 – Present

Full-Stack Developer – Automated Note Conversion Platform

www.noteworthy.xyz

Lead developer for NoteWorthy, a Next.js/TypeScript application that converts handwritten notes into styled PDFs and LaTeX code. Integrated the Google AI Studio API for content processing, implemented GitHub/Google OAuth for authentication, styled with Tailwind CSS, containerized a Node.js LaTeX compiler using Docker, and deployed the solution via Google Cloud Run on Vercel with a custom email server.

EDUCATION

2024 – 2028

B.Sc. in Computer Engineering

Boston University, Boston, MA

GPA: 3.96

- Division 1 Rowing Team
- Awarded Full Presidential and Athletic Scholarship
- Dean's List from Fall 2024

2022 – 2024

International Baccalaureate Diploma Programme

H-Farm International School, Venice, Italy

- Higher Levels in Mathematics, Physics, and Computer Science
